
Overview

The proposed platform is a social impact platform/network connect three users.... (1) **companies**, (2) **people**, & (3) **charities**. The idea is that each of these 3 users can have their own "**social impact page**", showcasing their goodwill, social impact & philanthropic efforts.

Companies & People can track & showcase their social contributions (such as volunteering, sponsorships, endorsements, cash donations and in-kind support).

Charities can showcase their work and the support received by Companies & People.

The design and user experience will be very similar to [LinkedIn Company pages](#), in the sense that there are predefined sections that are the same sections for all three types of users, as shown below in SECTIONS.

Defining the 3 "users"

(1) Companies (also to be referred to as [Businesses](#) or [Brands](#)) are precisely that... companies of any size, in any industry, anywhere in the world that "**give**" some kind of support to charities. For example, they let their employees volunteer time, or give sponsorships, endorsements, cash donations or even in-kind donations.

(2) People (also to be referred to as [Individuals](#) or [Philanthropists](#)) are either employees, customers of the companies or simply the general public. People that "**give**" some kind of support to charities. For example, they volunteer their time, or give sponsorships, endorsements, cash donations or even in-kind donations.

(3) Charities: (also to be referred to as [Non-Profits](#), [NGOs](#), or similar). These are entities that do the field work on any given social issues. They "**get**" the support from companies or people.

Defining important terms

When we refer to **SOCIAL CAUSES** (or a "cause") we are referring to the type of social cause, for example... Environment, Health, Kids, Animals, Education, Human Rights, etc... So, for example a company or an individual can support "Education" without indicating an specific charity in the education category. This is important, because to showcase an specific charity there will have to be approval by the admin of the charity page, but a company or an individual can certainly showcase their support for the "cause" until it gets approved to showcase the actual logo of the actual charity.

When it comes to measuring and showcasing **IMPACT**, the idea is not to use dollars as the unit of measurement but different metrics chosen by the charities, for example... how many kids got breakfast, how many trees were planted, how many turtles were saved, etc.. With time we will develop our own unit of metric. The option to show monetary amounts should be available but it has to be optional, because most companies/charities/people don't want to express it in monetary terms.

Sections of the Social Impact Page

PROFILE

Banner + Logo

Name

One-Liner Short Description

Type (Company, Non-Profit, Philanthropist)

Industry (...)

Location

ABOUT

Overview (Longer Description)

Details (website, address, phone, social media accounts, etc..)

Values

Social Impact Metrics (Trees Planted, Kids Fed, Hours Volunteered, etc..... icons/graphics)

Types of Support Given (Sponsorships, Donations, Volunteering, In-Kind, Endorsements, etc.)

Causes Supported (like Environment, Education, Health, Women, etc..) with icons.

* Charities Supported (like the Alzheimer's Society).... Specific Entities with their names & logos & links (subject to approval by charity)

Certifications (B-Corp, 1% Planet, etc...) with logos & links.

Showcase People's comments (Employees, Customers or General Public)... making comments (subject to approval before making comments public)

** For the pages of the Charities, instead of "Charities Supported" it would say "Supported by..." and show case companies logos or Individuals profile pictures and links to their Goowi Page.*

WAVES (Social Initiatives)

Similar to how in linked in they showcase POSTS or JOBS, in our platform we will show case "initiatives" which we call them "waves". More precisely "waves of goodwill". So when a company or an individual wants to add their support to a given cause or a charity.. they can add the following:

Are you creating a new wave or joining an existing wave?

If new...

Are you supporting a cause or an specific charity/non-profit? Search... (if the organization is not already in our database is important to add the organization's name, their logo, their website, a name of contact in the organization and their email & phone number...) The specific charity will have to approve the publication of their logo on your Social Impact page, but in the meantime the "cause" icon will be shown.

How are you supporting them? (Volunteering, Donations, Sponsosrships, Endorsements, In-Kind, etc..)

Are you suppotng in an specific location? If yes, where?

Is it associated to an event, like a gala or similar? If yes, add link to the event.

Do you want to specifically indicate a monetary value for your support? If yes, ... currency/amount. Do you want this to be visible or only keep it for your records and reporting?

Do you have images or videos to add? (recommended)

Do you have pdfs or other docs to add?

Tags (Goowi, UN, etc...)

Short Description of the initiative?

Long Description of the iniatative?

Do you want to let your employees, customers and general public make comments? (still being able to approve or disapprove a comment).. or not let anyone add comments.

Do you want to create a hashtag for this initiative? (to be used mainly within our platform)

If joining an existing wave....

Search by name, charity, hashtag, location, etc.. once found click on it.

And then most of the same points from above will apply... how are you supporting them, images, description, etc.. and it will be subject to approval from the creator of the wave and the beneficiary charities.

Some Key Aspects / Features

- Easily **editable social impact page while keeping the same page structure** for everyone (just like Linked Company Pages have always the same structure)

- Companies, Charities & People can **create** "waves" or **join** existing waves. Waves can be company-led, people-lead or initiated by charities.

- Public validation system where charities confirm company/people participation, and company's confirm when a charity adds them as sponsors

- Bidirectional linking (subject to approval). While approval from a charity is pending, it should showcase in the company/peopl page the "cause" category being supported. If a charity adds a spnsor/supporter and the company/people approval is pending, it should showase the industry of the sponsor/supporter.

- Impact Metrics (Infographic-style reports displaying social impact.).. for example icons of trees that get gradually painted as the support increases
